

“ As a full-time homesteader and living soil enthusiast, I find the Earthlight™ fascinating. Heathy soil requires biology, and soil biology needs proper moisture in which to live. The Earthlight™ indicates both of these critical components of healthy soil. ”

-**John Brazelton** Full-time homesteader, soil builder, and Instagram legend (@organarchist)

“ The Earthlight™ is an ingenious, simple to use, inexpensive tool that can help you monitor the health of soil. It's like taking the pulse of your garden, and if your soil is alive with microbes, you'll get the green light. We use the Earthlight™ to monitor the soil health of the community gardens and greenhouse at the Jackson Wellsprings in Ashland Oregon. Hopefully, this is just the first of many more creative inventions from Elemental Ohm. ”

-**Paul Mozina** Long time gardener, plant enthusiast and tender of a lush community garden plot in Southern Oregon.

“ My 16 year old son and I would always argue about how often to water plants. Many times after we plant seeds and get them sprouted. I would leave it up to him to take care of his plants and the plants would die. After he received the Earthlight™ He was able to tell right away whether the soil was in good condition or not for the plants to thrive. It was well worth the money and a great gift which is priceless for him because now he's able to grow more high quality food consistently which is one of his goals and it benefits him as a good farmer. ”

-**Alejandro Picker** Clean energy and disruptive technology enthusiast. CEO of Quantum Technology Consulting. Healer and Farmer.

“ The Earthlight™ lets me know the quality of the soil, both the moisture and the level of microbes and nutrients it contains. Many times I don't know what state the soil is in; this is problematic because sometimes I can add too much water and nutrients or too little, which would be less than ideal for the plants. I like how it is a simple device that uses the energy given by the active microbes in the soil to turn on the light. The Earthlight™ is a good addition to the tools that we use every day to care for our plants. ”

-**Alejandro Jr.** and student of soil. Receiver of Earthlight for birthday gift.

“ The Earthlight™ has so many uses and, like many important inventions, it was created by accident and I love that! I was interested in the Earthlight™ to help me keep indoor plants alive by alerting me to when it needs water or nutrients. It continues to give me confidence and my plant collection is growing as a result! I highly recommend giving Earthlight™ a try in your home or business. ”

- **Julie Harden** Shop-owner, homemaker and houseplant-keeping-alive extraordinaire.

“ As a medical cannabis grower who's won awards for my craft, I swear by Earthlight™. Whether I'm growing indoors or outdoors, my soil has an Earthlight in it. I've found great use with it in both environments and don't grow without one. Not only does it indicate when soil needs watering, but it will also indicate if the microbiology in your soil is poor. ”

- **Corey Allred** 2022 "Grow Your 4" Cup Champion in Jackson County, Oregon and long-time Cannabis grower.
